

# Department of Electronics and Telecommunication Engineering

## PROJECT BASED LEARNING

TE EXTC A

SEM V 2020-2021

For July- December 2020, the PBL problem statement for Third Year Electronics and Telecommunication Engineering students was to design a mobile based application for online shopping. This online shopping app could be designed for groceries or electronic gadgets using Firebase, Android studio or any other platform. The PBL exhibition was held on 07<sup>th</sup> November 2020 where students showcased their projects. Project groups were examined by faculty members of Electronics and Electronics & Telecommunication departments. Few photographs of projects are shown.

		40	Nikhil koli	
14	A1	4	Swapnil Adsul	Shopping Application for Groceries
		5	Akhil Vinodkumar	
		9	Yugant Baji	
		16	Akshay Chavan	
15	A3	43	Ritesh Kumar	Online grocery app
		44	Kiran	
		53	Akanksh Shetty	
16	A3	52	Shetty Akanksh Harish	Online Shopping Application
		54	Aniket Anand Patil	
		56	Sharad Nair	
		61	Pratyoosh	
		62	Aebin Thomas	

Mahatma Education Society's  
Pillai College of Engineering  
Department of Electronics Engineering  
**TE Electronics**  
**Odd Semester (2020-21)**  
**PBL TOPIC:Android App development**

Project-based learning (PBL) is a powerful teaching method that has extensive benefits for students, ranging from critical thinking to project management to self-confidence. Project-Based Learning is usually a collaborative process, which allow students to practice their communication skills and to learn to work together.

This new generation is really exposed to advanced gadgets and technologies. With the help of PBL students are utilizing subject knowledge to implement and design the problem statement given by the department. Every semester the Department suggests realistic problems and expects very simple solutions using easily available materials and components from the student.

**For July-December 2020**, the PBL problem statement for Third Year Electronics Engineering students was to develop an Android App which requires knowledge of subjects like Microprocessors and Microcontrollers, Design with Linear Integrated Circuits, DBMS. We have created problem statements with different features.

In the view of the current pandemic situation, people have adapted to online shopping for various needs right from basic needs like grocery ,vegetables to other luxury necessities.

**To design a platform for the various sellers to make their product available for selling online.**

**For e.g. Easy Market App:**

This application will help salespersons in managing the various types of Records such as client details, supplier details, product list and help to easily sell the product. The user can add a new product into the list by name, price or delete any product from the list which is not available in the market. It allowed changing the price of the product not affect the price registered in the catalogue of products. It shows how much the quantity of each product is present in the inventory. It has an option to filter the products. It allows to record the customer details and show when he last came, what products he bought that day, the total price of the products. It records and shows the supplier details like the name of supplier, last visit, amount. It also displays how much profit he earned that day and how much is initial money at the opening of the day and total money at the closing of the day.

## **Android App development**

**List of the Topics Developed by the students:**

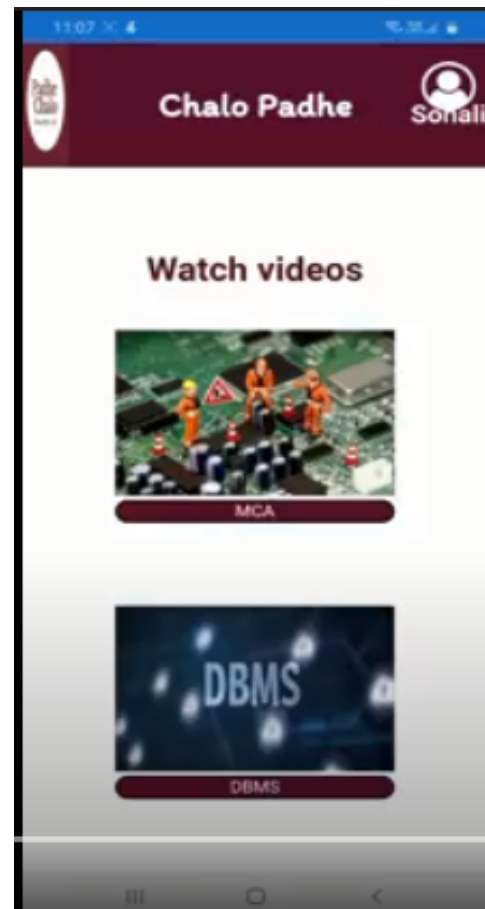

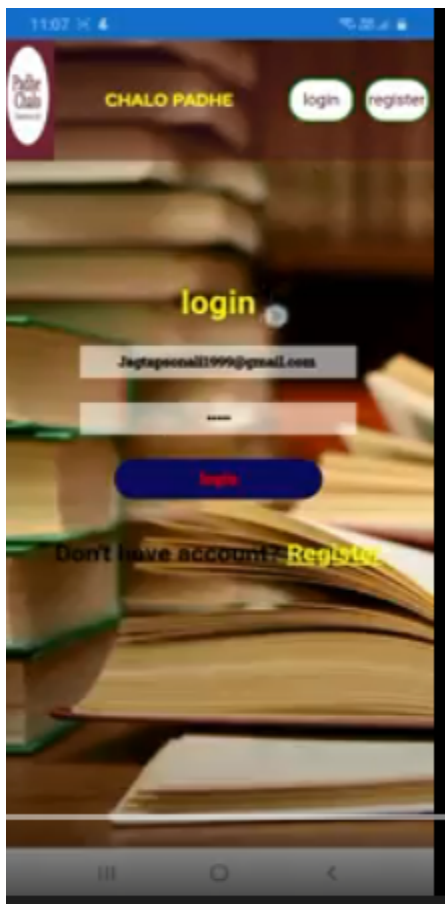

- Smart Grocers
- Library Management System
- Smart Buy
- CarBot(IoT)
- Indian Heritage and Culture
- Electronic Components
- Online Movie ticket booking
- Food delivery
- Library Management System
- E-learning App
- Book Addict : Online Books Shopping Store

15 student groups were working on different problems on development of Android App. Each group consists of 3 to 4 students. Many students have implemented the prototype and demonstrated their ideas in front of the internal examiners on **6<sup>th</sup> November 2020**.

### Some Project Screenshots:

#### 1.E Learning App

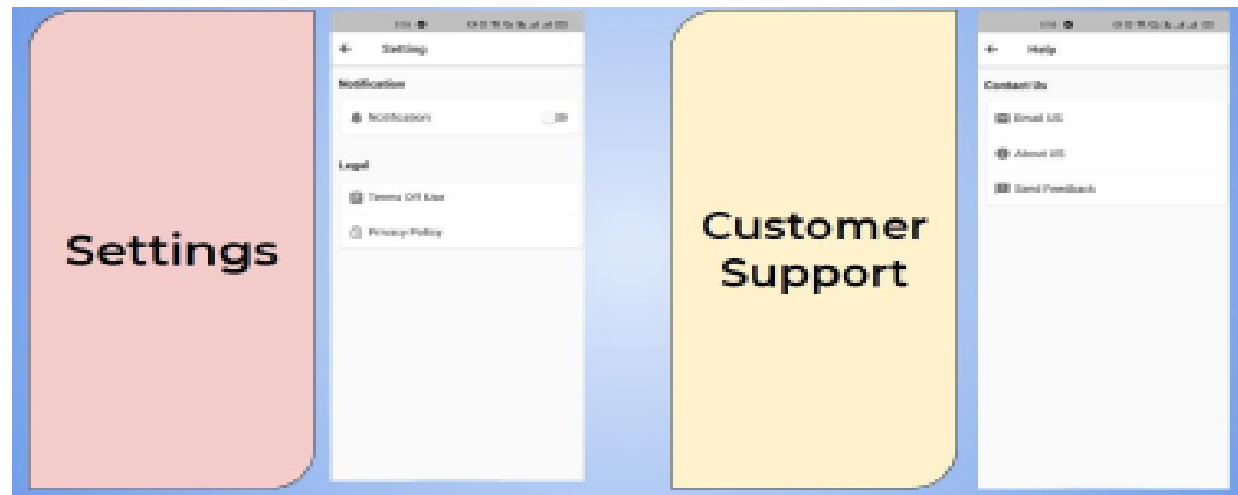

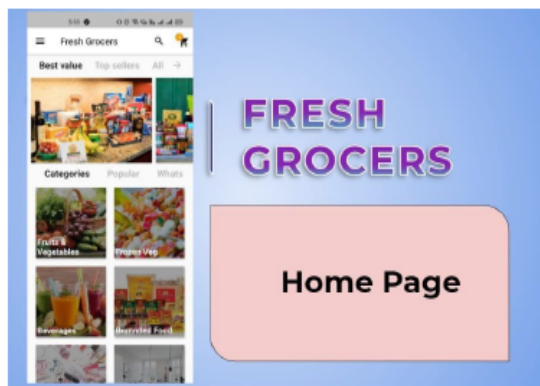

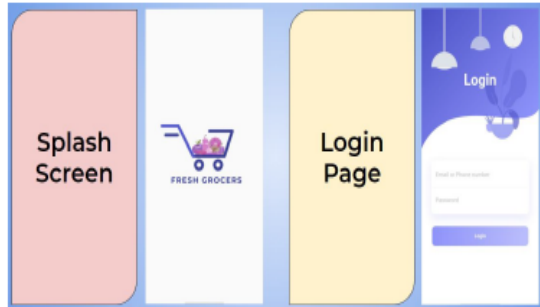

## 2. Library Management System

The screenshot shows a web browser window displaying the 'Online Library Management System' Admin Dashboard. The browser's address bar shows the URL 'localhost/library/admin/dashboard.php'. The page header includes the system name and a 'LOG ME OUT' button. A navigation menu contains links for 'DASHBOARD', 'CATEGORIES', 'AUTHORS', 'BOOKS', 'ISSUE BOOKS', 'REG STUDENTS', and 'CHANGE PASSWORD'. The main content area, titled 'ADMIN DASHBOARD', features six data cards:

Category	Value
Books Listed	24
Times Book Issued	7
Times Books Returned	4
Registered Users	6
(User Profile)	6
(Document/Key)	4

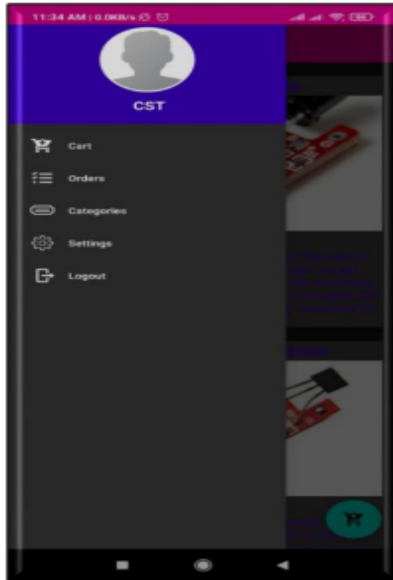

The video player interface at the bottom shows a progress bar at 0:38 / 1:00 and various control icons.

## 5. CAR BOT

Students Developed a web application and an android application for purchasing items from a shop. This project helped them in gaining valuable information and practical knowledge on several topics like designing web pages using html & css, designing of android applications, JavaScript, PHP and management of database using MySQL.
